

# PM Series High Precision Balances

## Features:

- User-Friendly Menu
- Leveling feet with 4 points of adjustment and spirit level
- Configurable RS 232 Interface
- Reads in g, oz, oz t, ct, counting, %
- Calibration Weight
- Filtering Levels
- Counting program for piece counting applications
- Percentage program for formulation weighing
- Adjustable zero tracking

The PM Series High Precision Balances are built for laboratory use with a readability of 0.001g. The design of the machine is made with large glass draft shields with an anti-static construction allowing for large objects to be weighed while maintaining protection from environmental conditions. The design also includes a bright backlit LCD display that is easy to read in any lighting condition including sunlight.

The PM Series features infra-red sensors that allow for hands free operation of TARE and CAL commands. CalQuick single button calibration is featured, making calibration simple and ensuring that the balance will be calibrated often during its use. When data has been collected the RS 232 interface allows communication with peripheral data collection and printing instruments.
